Background

The Resource Conservation and Recovery Act has been an enormously effective tool in achieving a dramatic transformation in the way that we manage hazardous waste. RCRA has allowed the Agency to develop a cradle-to-grave system to ensure the protection of human health and the environment when generating, transporting, storing, or disposing of hazardous waste. The Agency believes that a successful legislative process to make targeted changes to RCRA, could make the statute an even more effective tool in safely managing our solid and hazardous waste.

EPA has already held three roundtable meetings as one of its methods of soliciting input from a wide range of stakeholders. This notice announces an additional meeting scheduled for June 13, 1995. This meeting will focus primarily on issues faced by communities and small businesses, such as reporting requirements, public access to information, disproportionate impacts and tailored requirements.

In developing the package of targeted legislative reforms for RCRA, EPA will be following the principles for reinventing environmental protection outlined in the President's plan:

- Protecting public health and the environment is an important national goal, and individuals, businesses and government must take responsibility for the impact of their actions.
- Regulation must be designed to achieve environmental goals in a manner that minimizes costs to individuals, businesses, and other levels of government.
- Environmental regulations must be performance-based, providing maximum flexibility in the means of achieving our environmental goals, but requiring accountability for the results.
- Preventing pollution, not just controlling or cleaning it up, is preferred.

- Market incentives should be used to achieve environmental goals, whenever appropriate.

- Environmental regulation should be based on the best science and economics, subject to expert and public scrutiny, and grounded in values Americans share.

- Government regulations must be understandable to those who are affected by them.

- Decisionmaking should be collaborative, not adversarial, and decisionmakers must inform and involve those who must live with the decisions.

- Federal, state, tribal and local governments must work as partners to achieve common environmental goals, with non-federal partners taking the lead when appropriate.

- No citizen should be subjected to unjust or disproportionate environmental impacts.

Dated: June 6, 1995.

James H. Mathews,

Acting Assistant Administrator, Office of Solid Waste and Emergency Response.
